Summary

ML engineer with six years across fraud detection, predictive maintenance and ML platforms, now leading ML orchestration on Databricks. I also ship developer tools and have 20+ merged PRs in Meta, Google, Microsoft, Grafana Labs and Agentic AI Foundation projects.

Experience

Altimetrik · Lead ML Engineer — Jun 2025 – Present

Promoted from Senior ML Engineer. Own feature engineering and ML orchestration for Calibo's data and AI platform: technical design, delivery and integration across ML services and data pipelines.

- Built configurable data preparation in Python, PySpark and SQL, adding source filtering, missing-value handling, query profiling and custom feature creation.
- Built reusable scikit-learn training for six classification and regression algorithms, combining preprocessing, held-out evaluation and saved pipelines for inference.
- Connected profiling and preprocessing review workflows with LangGraph, FastAPI and Pydantic, validating plans and passing approved configurations between stages.
- Made training results traceable through Databricks and MLflow, recording evaluation metrics, model artifacts and registration results.
- Added pytest regression coverage catching invalid feature selections, unsupported preprocessing settings and training or evaluation data errors.

National Payments Corporation of India · Data Scientist (via Euclid Innovations) — Apr 2024 – Oct 2024

- Led fraud detection for AePS (Aadhaar Enabled Payment System), engineering features from 4TB+ of raw transactions into predictive models that cut fraud incidents by 1.2 million.
- Built a federated fraud-detection model for UPI, handling real-world financial data for newly onboarding Indian banks.

Siemens · Data Scientist and Software Engineer — Jul 2019 – Apr 2022

- Analyzed sound and sensor data from client assets for remaining-useful-life classification, reaching 92% accuracy in fault detection.
- Built dashboard views with API integrations showing the health of 97 assets alongside ML analysis.

Open Source

- **goose** (Agentic AI Foundation, 56k★): kept session context alive across the agent's reply lifecycle, including ACP delegation.
- **k6** (Grafana Labs, 32k★): static Prometheus remote-write labels, periodic file-log flushing, and `single()` in k6/html.
- **t3code** (T3, 31k★): async image decoding for a smoother chat timeline; consistent versions across desktop builds.
- **onnxruntime** (Microsoft, 22k★): int8 and uint32 support in the CPU Where operator.
- **Docusaurus**, **Lexical** (Meta), **osv-scanner**, **go-containerregistry**, **cel-go** (Google), **playwright-python**, **azure-cli** (Microsoft), **Unstructured**, **gogcli**: fixes and features across localization, editors, security scanning, registries and CLIs.

Projects

- **Codebloom**: VS Code and JetBrains extension that turns any codebase into a mind map with call arrows across files.
- **subpool**: single Rust binary exposing Claude, ChatGPT and Gemini subscriptions as one OpenAI, Anthropic and Gemini compatible API.
- **Anthropic performance take-home**: optimized vector kernel for a simulated machine, passing at 1,430 cycles. Also **OpenCalendly** and **ZenPDF**, open-source scheduling and PDF tools.

Skills

ML and data:	scikit-learn, PyTorch, PySpark, pandas, NumPy, SQL, feature engineering, model evaluation, time series, NLP
LLMs and agents:	LangGraph, LangChain, OpenAI GPT-4.1, workflow orchestration, RAG
MLOps and platforms:	Databricks, Unity Catalog, MLflow, Kubeflow Pipelines, Docker, Kubernetes, AWS, Google Cloud
Engineering:	Python, Go, TypeScript, Rust, FastAPI, Pydantic, pytest, Git, GitHub Actions, SonarCloud

Education

SRM University · B.Tech, Computer Science and Engineering — 2015 – 2019
